SCHWEISSEN & SCHNEIDEN 2013: Focus on Thermal Spraying

Specialists in Surface Protection Will Demonstrate Their Efficiency

Cooperative Booth Covering an Area of 200 Square Metres in Hall 5

On September 16 - 21, 2013, the world's premier SCHWEISSEN & SCHNEIDEN fair will focus on the innovative competence of international joining, cutting and surfacing technology. Around 1,000 manufacturers from more than 40 nations will present their product premieres and refinements. In this respect, the 18th edition of the most important sectoral meeting place anywhere in the world will put the spotlight on thermal spraying too. In Hall 5, a joint appearance on Booth A 120 will be dedicated to the various surfacing processes which provide wear and corrosion protection for surfaces subjected to high stresses.

Under the overall responsibility of GTS - Gemeinschaft Thermisches Spritzen e.V. ("Association of Thermal Sprayers"), 13 manufacturers and users will present their newest developments for surface protection on 200 square metres - including nine German companies, three Swiss companies and one Dutch company. The specialists will demonstrate that thermal spraying can protect the most diverse materials such as metals, ceramic, plastic, textiles, wood or glass. Moreover, they will show a cross-section of the utilisation fields including (for example) the manufacture of turbine blades, sealing rings and printing rolls.

SCHWEISSEN & SCHNEIDEN Will Show the Newest Developments

The exhibits on the GTS subject booth at SCHWEISSEN & SCHNEIDEN 2013 will include thermal spraying torches, innovative coat systems for agriculture, the textile industry or the automotive sector as well as laser optics for spraying torches in addition to the relevant powder nozzles and feeders. The portfolio of the exhibitors will also encompass turnkey installations for surfacing.
